

A Software for Personal Knowledge Logging

Robert Cerny

What is it?

- A tool for people who want to record what they know and where they know it from
- A Web application for creating topics, associations and encounters, including a journal to see the development over time
- Based on Topic Maps and REST
- Implemented in PHP, JavaScript and MySQL with support of HTTP, JSON, AJAX, CSS, XHTML and more

How will/could it develop?

- CMS for Homepages and Weblogs
- Knowledge Syndication via HTTP
- Methods for topics in JavaScript or PHP
- E-Learning system
- Topic Map export
